#BI21.4 Environmental Innovation

With the Pandemic still with us, but a sense that we're able to see the way forward for the global business community, our focus is recentring on the Climate Emergency. Across sectors, we see an awareness of the need to put environmental issues front and centre of our business development thinking. This brings with it opportunity and new ways of thinking as Innovation and innovative ideas become a significant part of how we tackle it. There are international opportunities built in, innovative thinking is coming from different continents, and our ability to communicate and collaborate globally is an asset as we chart the way forward. Our discussion brings together a panel of innovators and business leaders in innovation to look at some great ideas and how we can apply them on a global basis.

Zoe Darlington

Zoe helps engineering and manufacturing leaders shift from high waste and inefficiency to green & lean in 6 months, embedding sustainability that saves time and money. She believes that businesses that do good – do good business. Zoe has over 20 years Continuous Improvement, Quality Improvement and Change

Management experience, within the electronics, engineering, aerospace, defence & FMCG sectors. She has a proven track record for delivering cost saving Continuous Improvement and waste reduction.
